## HPLC DATA SHEET

Chlorpheniramine Maleate (KP, Related substances)

## 1. Chlorpheniramine maleate

## **HPLC** condition

Column C18 (10um, 3.9mm l.d. × 300mm)

Mix 200 volumes of Acetonitrile and 800 volumes of a solution containing 8.57g/L Mobile Phase

of Ammonium dihydrogen phosphate and 1mL/L of phosphoric acid

Flow rate Adjust so that the retention time of chlorpheniramine is about 11 minutes

Temperature 25℃

Detector UV (225nm)
